Manpower Roster Optimisation - Final Assignment Deliverables

Roll number: ROLL_NUMBER_PLACEHOLDER (replace before submission)

Executive summary

This package contains a corrected-source, independently verified feasible roster and shipment-flow plan for the 30-day horizon. The staffing plan uses fixed employee-level stage and shift assignments, staggered FTC weekly offs, explicit one-hour Primary-to-Secondary eligibility, and a one-hour post-horizon processing tail. The result is reported as verified feasible; it is not labelled globally optimal because the implemented construction is a robust heuristic rather than a proven optimal MILP solve.

Reduced CP-SAT status: OPTIMAL; objective 2496000; bound 2496000; runtime 0.027s; gap 0.00%. The expanded employee-level roster is independently simulated and validated; its cost is reported separately from the reduced-model objective.

Key assumptions

The 10% Flex and PT limits are interpreted as headcount shares of the fixed employee pool, with FTC at least 80%. Hourly productivity is uniform during each employee's shift. Published percentages are normalised and allocated with largest remainder. Queues may carry across hours and days; the final D30 secondary shift includes a one-hour tail into D31. No labour is assumed after that tail.

Cost summary

Category	Headcount	Deployment days	Rate	Monthly cost
FTC	117	3008	■20,000/month	2340000
Flex	0	0	■700/employee-day	0
PT	13	390	■12,000/month	156000
Total	130			2496000

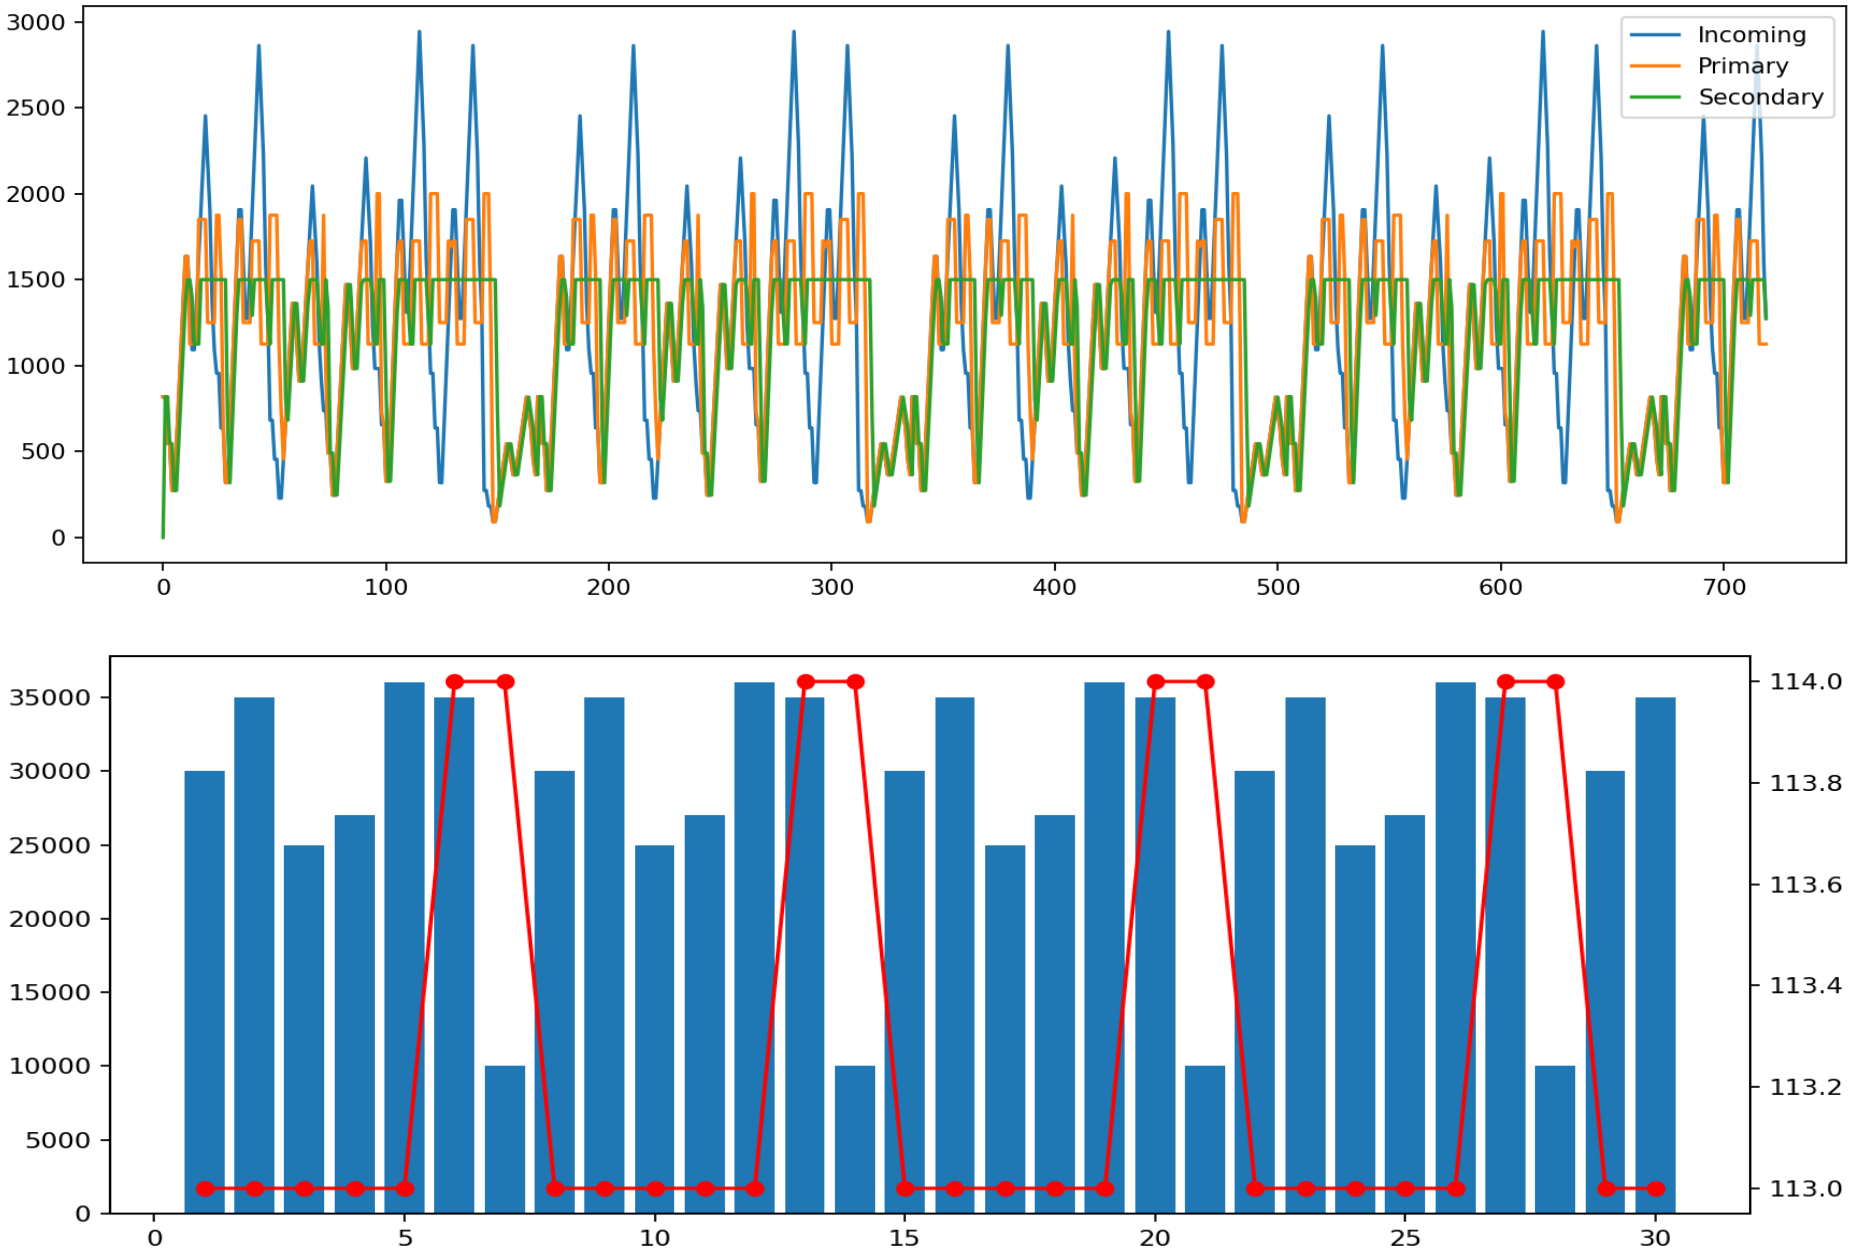

All-FTC comparison: a like-for-like 152-employee all-FTC roster costs ■2,600,000 before any productivity benefit. The mixed roster costs ■2,496,000, a nominal saving of ■104,000 (4.00%). This is a feasible comparison baseline, not a proven all-FTC optimum.
